Care Coordination

CritiTrac standardizes your care delivery and documentation at Code Blue events.

Highlights

Reduce variability during Code Blue rescue events to better coordinate care delivery and to introduce data collection efficiencies.

- Visual prompts and real-time accuracy

- Standardizes care delivery based on trusted guidelines

- Robust datasets for analysis and process improvement

Code Blues happen, but not often.

On average, **290K** in-hospital code blues occur each year. **Variability in care** may occur because code blues are infrequent and high-stress situations.

CritiTrac is designed to provide visual prompts guiding providers through ACLS guidelines and recording the event workflow to **standardize care delivery**.

Adherence with the Guidelines makes a measurable impact.

Every **10%** increase in adherence to the ACLS guidelines increases the likelihood of ROSC by **30%**.

CritiTrac's patented, award-winning technology was **designed by critical care providers** to make it easy to Get with the Guidelines©.

The past cannot inform the future, if undocumented.

A study of patient outcomes found that there were resuscitation **documentation errors** committed in **40%** of cases.

CritiTrac's pre-defined and customizable selections of interventions allow for **quick, accurate** and **standardized** documentation, collecting **robust datasets**.
